

Design R&D Euromobil and Roberto Gobbo

Project

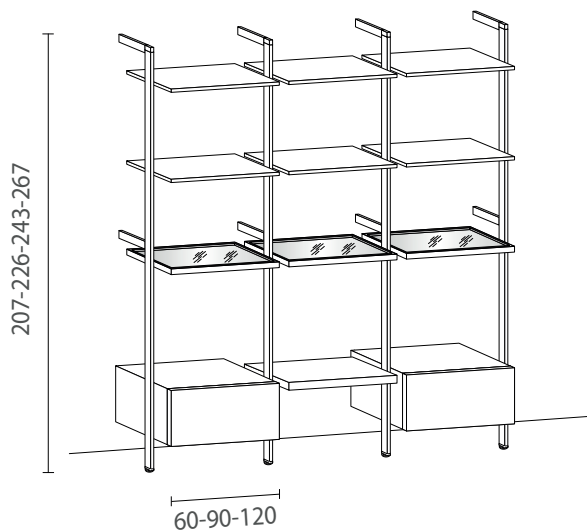

Totem is a highly versatile bookcase that allows you to add, in addition to glass or melamine shelves, also desks and storage compartments, thus satisfying the needs emerged with smart working and remote teaching. The structure is defined by an aluminum pole that rises from the floor to the ceiling and which allows great compositional freedom: the bookcase can in fact be positioned in the center of the room (as a dividing element in an open space environment), used as a backdrop to screen a space portion or, again, fixed to the wall. Totem can be equipped with dimmable lights placed on the side of the structure, so as to generate vertical lines of light with a sure scenic effect.

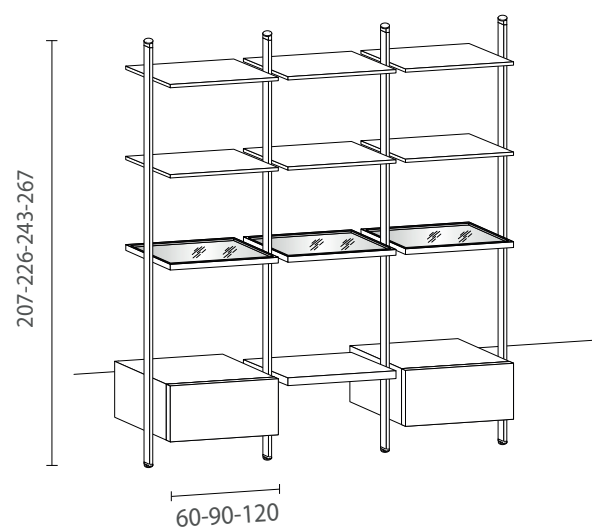

Available finishes
